Recovery Experience

Be prepared for a disaster by protecting your business critical applications and services with New Signature's Recovery Experience

Your Business Needs

- Consistent and affordable invoices for my critical application infrastructure in case of disaster
- Recovery plan to protect business critical applications
- Global data center footprint to allow for my failover strategy
- Retaining a team with breadth of knowledge to respond to a disaster
- Recovery plan to satisfy regulatory and audit requirements

How We Help

- We perform an assessment and analysis of your servers during on-boarding
- We continuously monitor the health of replication
- We have the skills and knowledge to execute a test and recovery
- Document the recovery plan for the protected workloads
- Ensure your recovery plan gets tested periodically

Service Benefits

- Confidence that your recovery plan is ready and tested
- Near synchronous recovery point objective for data
- Enterprise quality technology
- Cost savings over capital investments in datacenters
- Test without shutting down applications
- 24/7/365 skilled team of experts

Powered by Microsoft Azure Site Recovery Technology.

Azure Site Recovery is part of the Operations Management Suite on Microsoft's Azure cloud platform

Managed Services

New Signature's Recovery Experience provides a comprehensive Recovery Plan and team of experts to help create, update, maintain and execute the recovery plan.

In the event where a recovery is required, New Signature's highly skilled team of experts are available 24/7/365 to take that call. You can rest assured that your application would be available in case your data center is destroyed by any type of disaster.

Recovery Experience is a pillar of New Signature's IMX Managed Services. IMX provides 24/7 enterprise-class systems management of infrastructure, server and application layers, including complete health and performance monitoring for on-premises and hybrid cloud environments.
