Getting Started with Advanced Analytics and Azure IoT
Getting Started with Advanced Analytics and Azure IoT

New Signature offers two pre-configured IoT offerings that help you determine how IoT can increase your agility and profitability.

IoT QuickStart One-Day Workshop
During this workshop, New Signature experts will help you determine your business challenges and develop an analysis to align your potential IoT strategy for success.

Proof of Business Value
Get meaningful insights from the data generated by the connected devices and systems. IoT Consulting Services helps you collect near real-time data and implement automated notifications and responses. A centralized and automated monitoring solution delivers actionable next steps to fully realize operational efficiencies.

IoT: Connectivity-Analytics-Action
The Microsoft Azure IoT Suite allows you to mine and analyze corporate data to create new insights and predict outcomes. Make use of long-term data trends with a functional dashboard to find patterns and correlations which help you better understand your business.

New Signature’s IoT and Power BI offerings help to make your business more agile and cost-efficient and accelerate your time-to-value.

Client Insights
New Signature partnered with a leading food manufacturer to develop an IoT solution that would eliminate weight variations in their products, which was leading to significant losses.

By strategically connecting the company’s existing production equipment to the Internet of Things (IoT), they could track weight differentiation in real-time and adjust its processes to correct any error. We then delivered their data on the user-friendly Power BI dashboard. The company is now positioned to save hundreds of thousands of dollars per year per product.
